Saint Olaf College MN

ABSTRACT

A study gathered information to assist as guidance in planning gender communication awa eness programs that were appropriate to the St. Olaf (Minnesota) college campus. Subjects, 92 female and 96 male faculty, 133 female and 136 male staff, and 100 students in the sophomore, junior, and senior classes filled out questionnaires designed to provide information about various understandings, perceptions and experiences regarding gender communication. The project was initiated by the Human Relations Coordinator who had recently assumed the responsibility of the equal opportunity office. Return rate was very high--between 70-75%. First, gender communication was defined at St. Olaf as "appropriate relationships between men and women in the St. Olaf community setting." This implied that the scope of the issue was broader than sexual harassment or discrimination and included such relationships as casual, day-to-day interactions. Second, the issue included interactions of genders and did not focus only on females or identify one gender as the oppressed and the other as an oppressor. Third, since gender communication does not occur in isolated segments of the community, all units were included in the study. The study provided information that resulted in improved understanding of the climate at St. Olaf and that can be used as a basis for future decisions. The information obtained from this project should encourage other institutions to think of their campus climate for gender communication in a similar broad perspective. The student, faculty, and staff questionnaires are attached.) (RAE)

National Women's Studies Association 10th Annual Conference, June 22-26, 1988 University of Minnesota, Minneapolis, MN

During the spring of 1986 and the following 1986-87 academic year, the St. Olaf Human Relations Coordinator, the Committee on the Status of Women and the Director of Educational Research planned a project to gather information about the gender communication climate on the St. Olaf College campus. The group developed questionnaires designed to provide information about various understandings, perceptions and experiences regarding gender communication. A version of the questionnaire was prepared for each of the three groups surveyed: faculty, staff and students. The purpose of the survey was to gather information to assist as guidance in planning gender communication awareness programs that were appropriate to the St. Olaf campus. The information has been useful in planning proactive, educational activities, e.g., a handout for freshmen, workshops and seminars.

Context for the Project

The project was initiated by the Human Relations Coordinator who had recently assumed the responsibility of the equal opportunity office through an appointment by St. Olaf's new president. The president assured her of his support for her work in this area. Before making plans for any program to increase gender communication awareness at St. Olaf, she felt it was necessary to have better information about the general campus climate than was currently available to her. Although she had worked with individual faculty, staff and students who sought her

advice and assistance about gender related issues, she had no idea about the representativeness of the experiences of those individuals. Thus, the context for the project was not the result of crisis or particular problems, but was the desire to create a higher level of understanding and awareness of an issue in which all campus members must take responsibility. As noted in the questionnaire cover letter from the president, "St. Olaf is committed to being an inclusive community which values individual worth and dignity and is committed, therefore, to the considerate and respectful communication appropriate to such a community."

The purpose and the scope of the issue provided direction for the project and made it unique among gender related research completed at other institutions. First, gender communication was defined at St. Olaf as "appropriate relationships between men and women in the St. Olaf community setting." This implied that the scope of the issue was broader than sexual harassment or discrimination and included such relationships as casual, day-to-day interactions. Second, the issue as defined at St. Olaf, included interactions of genders and did not focus only on females or identify one gender as the oppressed and the other as an oppressor. Third, since gender communication does not occur in isolated segments of the community, all units were included in the study. Thus, since it was the goal to improve gender communication in the campus wide community, the committee decided that if they were to design the best programs for that community,

the information must be obtained from both genders, not just the females, and from all segments, i.e., faculty, administrative/professional, buildings and grounds, secretarial, and food service staff and students; and would include a wide range of interactions between the genders.

Design of the Questionnaires

Three publications of the Project on the Status and Education of Women of the Association of American Colleges (AAC) were particularly useful in identifying the climate dimensions that should be pursued in the research at St. Olaf. [!] However, the AAC research staff examined the campus climate for only female faculty, administrators and graduate students. While it seemed necessary to include a wider range of groups in the St. Olaf study than those included in the AAC work, the reports provided valuable information about the common behaviors experienced by females on the nation's campuses, outside and inside the classroom. The report, "The Classroom Climate: A Chilly One for Women," was particularly valuable in the portion of the project related to gender communication in the classroom.

As indicated earlier, a wide scope of behaviors was included in the questionnaire that ranged from overt, physical harassment to what some term as "micro-inequities," because they are so small (see attached questionnaire). Although these "micro-inequities" may seem small and insignificant in isolation, research shows that upon repetition, they can have a major

impact. Such behaviors include interruptions when speaking, greater recognition of a speaker of one gender over the other, and other ways of being overlooked and discounted.

The general questions addressed in the St. Olaf student gender communication questionnaire (see Appendix A) included the To what extent are professors equally encouraging of following: male and female students in classroom participation and equally supportive of male and female student comments? How frequently have students observed or experienced inappropriate gender related behaviors exhibited by faculty, others in authority and other students (about eight behaviors were included)? What behaviors are included in students' definition of sexual harassment? What is the response of students to inappropriate gender related behavior? To what extent are students aware of grievance procedures and the consequences of complaints? Regarding the future, do students support the College's providing gender communication workshops and do they support the inclusion of a gender communication item on the St. Olaf course evaluation form?

The general questions addressed in the faculty and staff gender communication questionnaires (see Appendices in B and C) included the following: How frequently have faculty and staff observed or experienced inappropriate gender related behavior by co-workers or colleagues and students? What behaviors are included in their definition of sexual harassment? How have they responded to inappropriate gender related behavior? What do they

perceive to be the St. Olaf climate for women faculty and staff members? How aware do male and female faculty and staff think they are about gender communication issues? Would they encourage St. Olaf to provide gender communication workshops? What differences, if any, have faculty observed between male and female student behavior in the classroom? Would faculty suggest including an item in the St. Olaf course evaluation form regarding gender communication in the classroom?

The student questionnaire was distributed through campus mail to approximately 100 students in each of the sophomore, junior and senior classes. A cover letter from the college president accompanied the questionnaires to all groups. An article about the project and the questionnaire appeared in the student newspaper a few days before the forms were distributed. The overall student return rate was 72%, a higher rate than is usually obtained by one mailing plus a follow-up.

The faculty and staff questionnaire were distributed through campus mail to those persons who had worked at St. Olaf for more than one year. The faculty form was distributed to all female faculty members, n=92, and a similar sized, random sample of male faculty, n=96. A return rate of 75% was obtained for both faculty groups with only one mailing. High return rates were also achieved from a single mailing of the staff, with 70% of the 136 males and 75% of the 133 females in the staff sample returning the questionnaire.

Use of Information

Several types of illuminating information can be gained from such a project that have a variety of uses. Listed below are a few of the several programs and offices that could gain valuable information from similar p_r ojects:

Faculty Development Programs. Areas of agreement and disagreement of male and female students regarding inequities in the classroom can be identified. Similar analyses can be made of male and female faculty perceptions of student behaviors in the classroom. Such results have implications for faculty programs regarding techniques to elicit responses from students and techniques for dealing with student-student interactions in the classroom.

Administration. Administrators responsible for evaluation of departments, courses, etc., will find student perceptions of the gender climate in the classroom valuable information in teaching evaluations. A gender communication item has been added to the standard course evaluation form at St. Olaf. It obtains information about provision of equitable learning environments for both genders in the classroom.

Student Dean's Offices. The questionnaire provides a wealth of information about student-student interactions outside the classroom around which the student dean's offices can plan appropriate programs.

Department Chairs and Key Faculty Committee Chairs.

Perceptions of female faculty regarding committee assignments

can be helpful to those assigning committee responsibilities.

Career Advising. Definitions of sexual harassment and responses to inappropriate behavior can provide direction for programs regarding inappropriate behavior that might be encountered on future jobs.

Student Work Coordinator. The illum:native information gathered in the St. Olaf approach that included all segments of the college community can provide extremely valuable information about sources of possible problems in which employment groups with different definitions of inappropriate behavior find themselves working together. A special program was planned this year for buildings and grounds employees who work closely with students during the summer.

Human Relations Coordinator. The information gathered in the project is clearly rich with information that can assist in designing programs and publications for different groups. Upon analyzing our results, it is clear that very different programs must be provided for several distinct groups who currently have such different perceptions and definitions regarding gender communication issues at St. Olaf. Programs implemented this year by the coordinator included a freshman brochure, workshops, retreats, mediation group, and sexual assault resource and educational network.

Closing Comments

The gender communication project provided rich, illuminative information that resulted in improved understanding of the climate at St. Olaf and provided credible information that can be used as a basis for future decisions. Several characteristics of the project contributed to the quality of the information about the climate at St. Olaf and made it unique among research projects on gender communication. Those characteristics included the following:

- Perceptions and experiences of both males and females were gathered.
- Comparable information was gathered from all components of the campus, i.e., staff, administrators, faculty and students. This provided some of the most useful information, perhaps because there was no research literature reporting such results from other campuses.
- Information was gathered about a wide range of behaviors that ranged from overt, physical harassment to small, micro-inequities such as speech interruptions.
- A sourd combination of quantitative and qualitative data was gathered. Each form of the questionnaire produced about fifteen

pages of written comments that proved extremely valuable in interpreting the quantitative data.

The valuable information obtained from this project should encourage other institutions to think of their campus climate for gender communication in a similar broad perspective. On any campus, but particularly a small residential college such as St. Olaf, gender communication is not isolated within the classroom nor within the dormitories. It includes the entire campus community, which makes all groups responsible for the climate of gender communication.

GENDER COMMUNICATION QUESTIONNAIRE - FACULTY

Directions: For each of the following questions, please circle the number beside the answer that best applies to you.

- 1. How long have you taught at St. Olaf?
 - 1. 1-6 years
 - 2. 7-15 years 3. Over 15 years

- 2. What is your status?
- 3. What is your gender?
 - l. Male
- 1. Part-time 2. Full-time 2. Female
- 4. In the classes that you have taught, please indicate what difference in behavior, if any, you have observed between female and male students for each of the following: (Please base responses on the last 5 years at St. Olaf.)

		Men Much More Than Women	Men Some- what More Than Women	About The Same	Women Some- what More Than Men	Women Much More Than Men	N/A, Never Observed Gehavior
a	Willing to volunteer responses in class	1	2	3	4	5	6
ь	Willing to contribute when called upon	1	2	3	4	5	6
с.	Willing to defend position	1	2	3	4	5	6
d.	Interrupting another student before response is complete	1	2	3	L ₄	5	6
e	Seeking help outside of class	1	2	3	4	5	6
f.	Openness to constructive criticism	1	2	3	4	5	6
9	Attempting to intimidate you as instructor	1	2	3	4	5	6
h.	Other (Specify:)	1	2	3	4	5	6

- 5. Have you been the subject of gender related, inappropriate treatment by students of the opposite gender?

 - 2. Yes, once
 - 3. Yes, a few times
 - 4. Perhaps, not sure if inappropriate behavior were gender related.
- 6. Listed below are some interactions that might occur between colleagues. For those interactions that you view as gender related, please indicate which, if any, you have observed in a colleague and which, if any, you have personally experienced. (Please base responses on the last 5 years at St. Olaf.)
